

AL4 / DP0 Oil Cooler Adapter

This Adapter allows for the fitting of an auxiliary Oil Cooler to vehicles fitted with a DP0 or AL4 transmission.

These transmissions are known to run hot and our research has shown around a 20% reduction in the transmission running temperature.

Simply remove the existing Heat Exchanger, re-using the original Banjo bolt and O'rings will allow the connection of the Auxiliary Cooler hoses. Then re-fit the heater hoses to by-pass the original heat exchanger.
